

Pheasant Stocking in NJ:

A New Approach to Bird Allocation

NJ Division of Fish and Wildlife

Development Process and Next Steps

- Jan2015 : Pheasant & Quail Stamp Buyer Survey
- Jan 2015 – Jan 2016: Internal meetings and draft model development
- Jan 2016 : Presentation to F&G Council's Game Committee
- March 2016: Presentation to Fish & Game Council
- June 2016: Presentations at State Federation
-  • June 2016: P&Q Stamp Buyers Stakeholder Meetings
- July/August 2016: Revise & Finalize
- September 2016: Presentation to F&G Council – Vote to Adopt
- Sept/October 2016: Division Reps present
- November 2016: Begin Stocking according to Pheasant Allocation Model

Stocking Summary

- ~ 55,000 pheasant/year
- 23 WMAs (plus DWGNR and Fort Dix)
- Birds divided by Region (North, Central, South)
- 15 days of stocking (Nov. – Dec.)

Current Allocation Method

- **Step 1:** Birds divided by Region
 - North 53%
 - Central 23.5%
 - South 23.5%
- **Step 2:** Birds divided within region to WMAs & stocking day

Thanksgiving Day is Nov. 26, 2015

revised: 5/12/2015

Current Allocation Approach

- Criticisms regarding **unequitable regional distribution**
- Concerns regarding bird/hunter **densities and safety**
- Criticisms about bird/hunter densities and **quality of hunt**
- Not designed to allocate birds based on **objective & measurable parameters**
- Makes allocating birds to “new WMAs” (or from “deleted WMAs”) or from varying pheasant production numbers a **subjective process**

New Allocation Model

Goal: Develop an *objective approach* for distributing pheasant that incorporates biological, physical, and/or social factors and results in an equitable allocation of birds among WMAs to *maximize hunter safety & satisfaction*

Informed Decision Making

2014 Pheasant & Quail Stamp Buyers Survey

- Conducted Spring 2015
- Emailed to 6,643 stamp buyers from 2014
- 1,189 successfully completed survey (1,189/12,296) ~10%

Safety & Crowding

on stocked WMAs

Stocked WMAs sometimes or always too crowded = 89%

Sometimes apprehensive about personal safety = 62%

Usually feel unsafe when hunting stocked WMAs = 8%

Safety & Crowding

on stocked WMAs

Near Miss Event:

Witnessed = 31%

Involved in = 14%

Hit by spent pellets = 45%

Hunting Accident:

Witnessed = 5%

Involved in = 2%

Safety & Crowding on stocked WMAs

Crowd Avoidance

24% of survey respondents sometimes avoided the stocked WMA closest to their home because it was too crowded

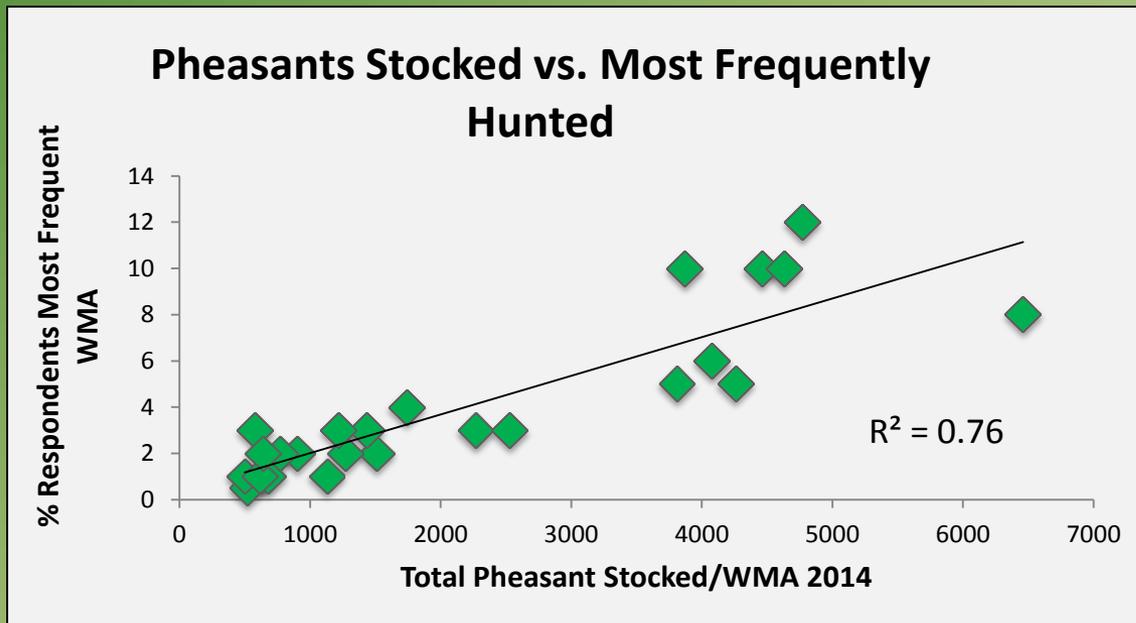

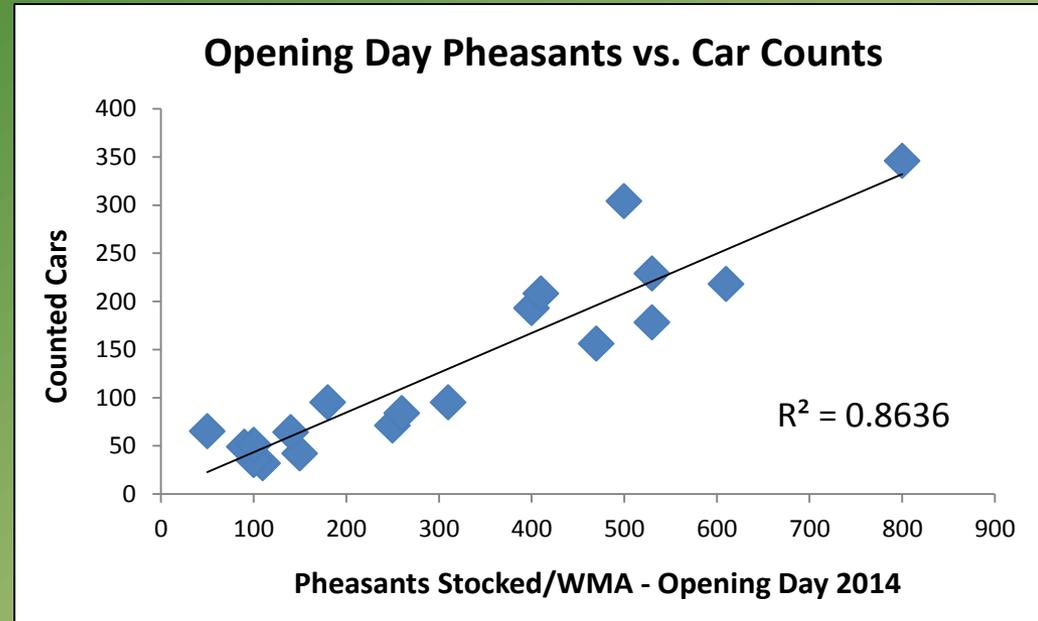

Quality of Hunt

What Contributes Most to Hunter Enjoyment

1. Number of birds stocked
2. Size of area stocked (or area to hunt)
3. Habitat quality
4. Proximity to home

Quality of Hunt

- Number of Birds Stocked

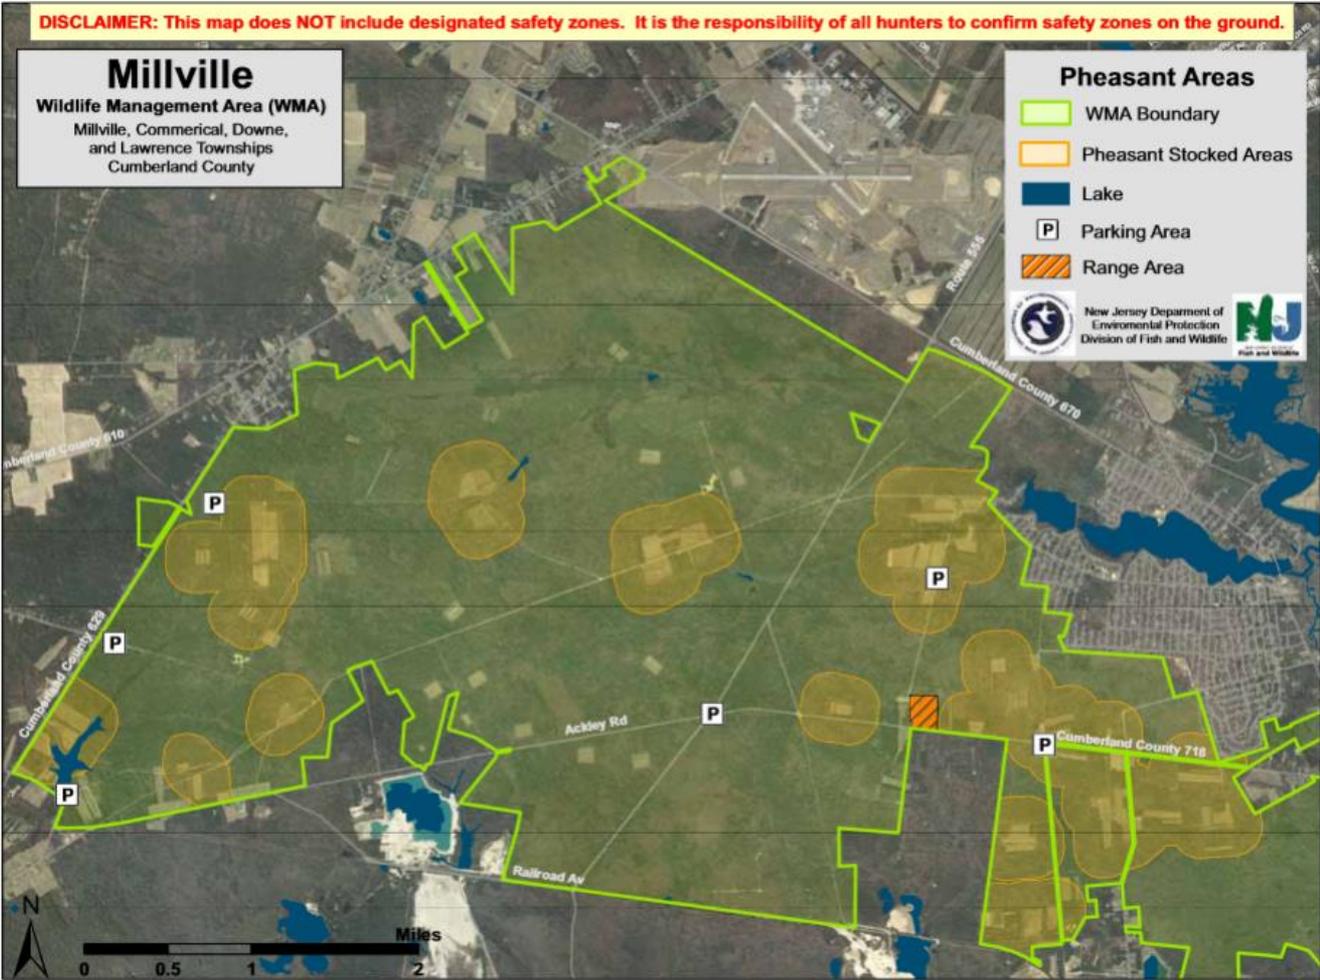

Hunters Follow the Birds

Quality of Hunt

- Size of Area Stocked

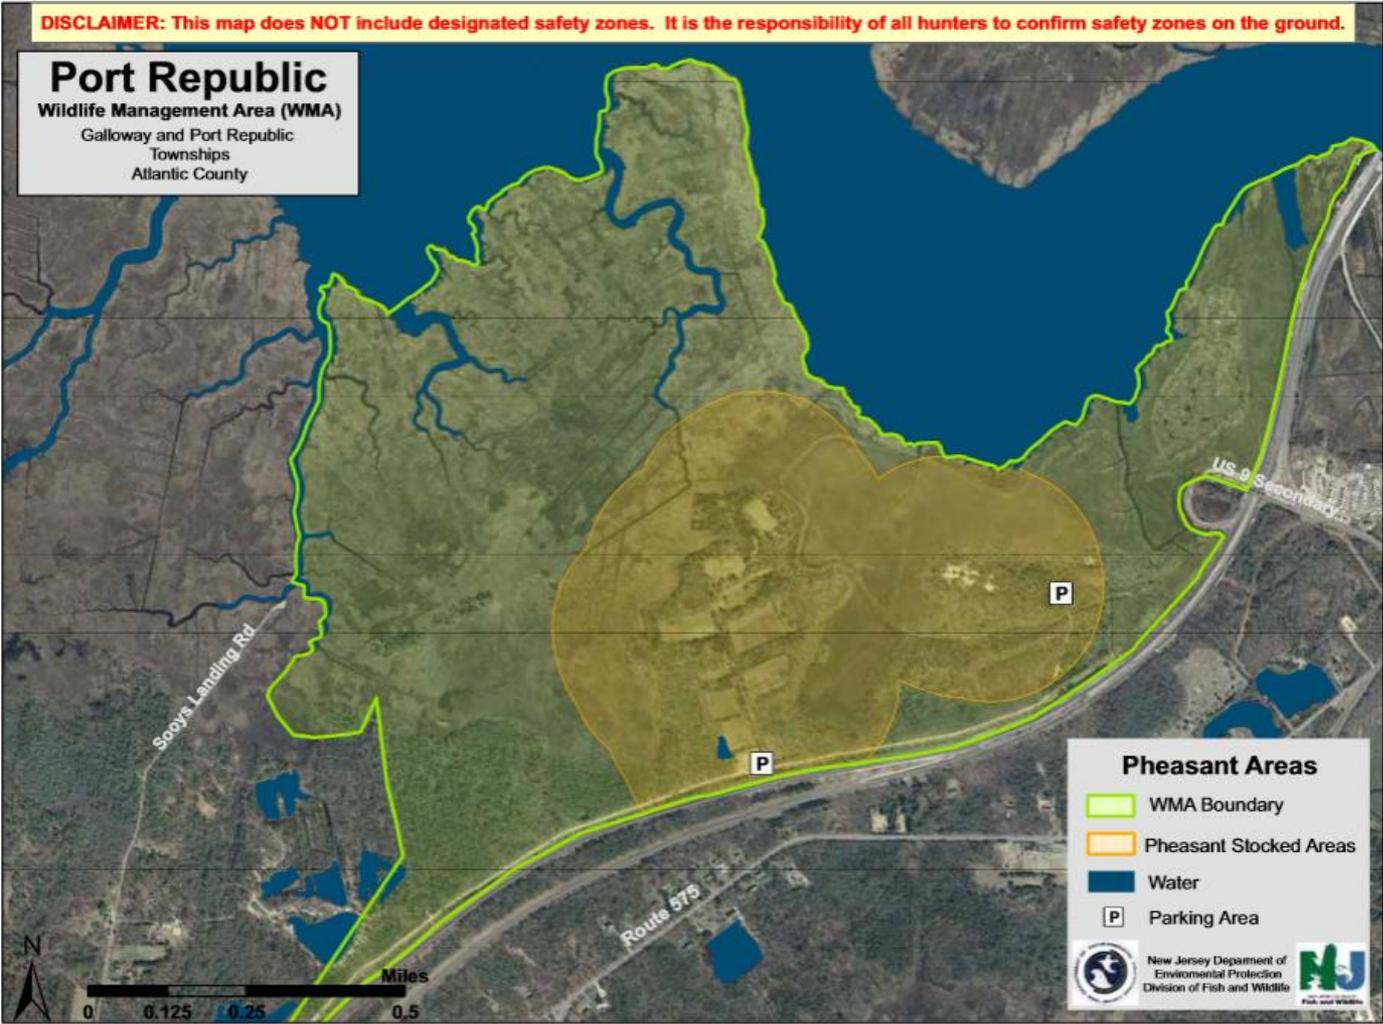

2,801 Acres Stocked

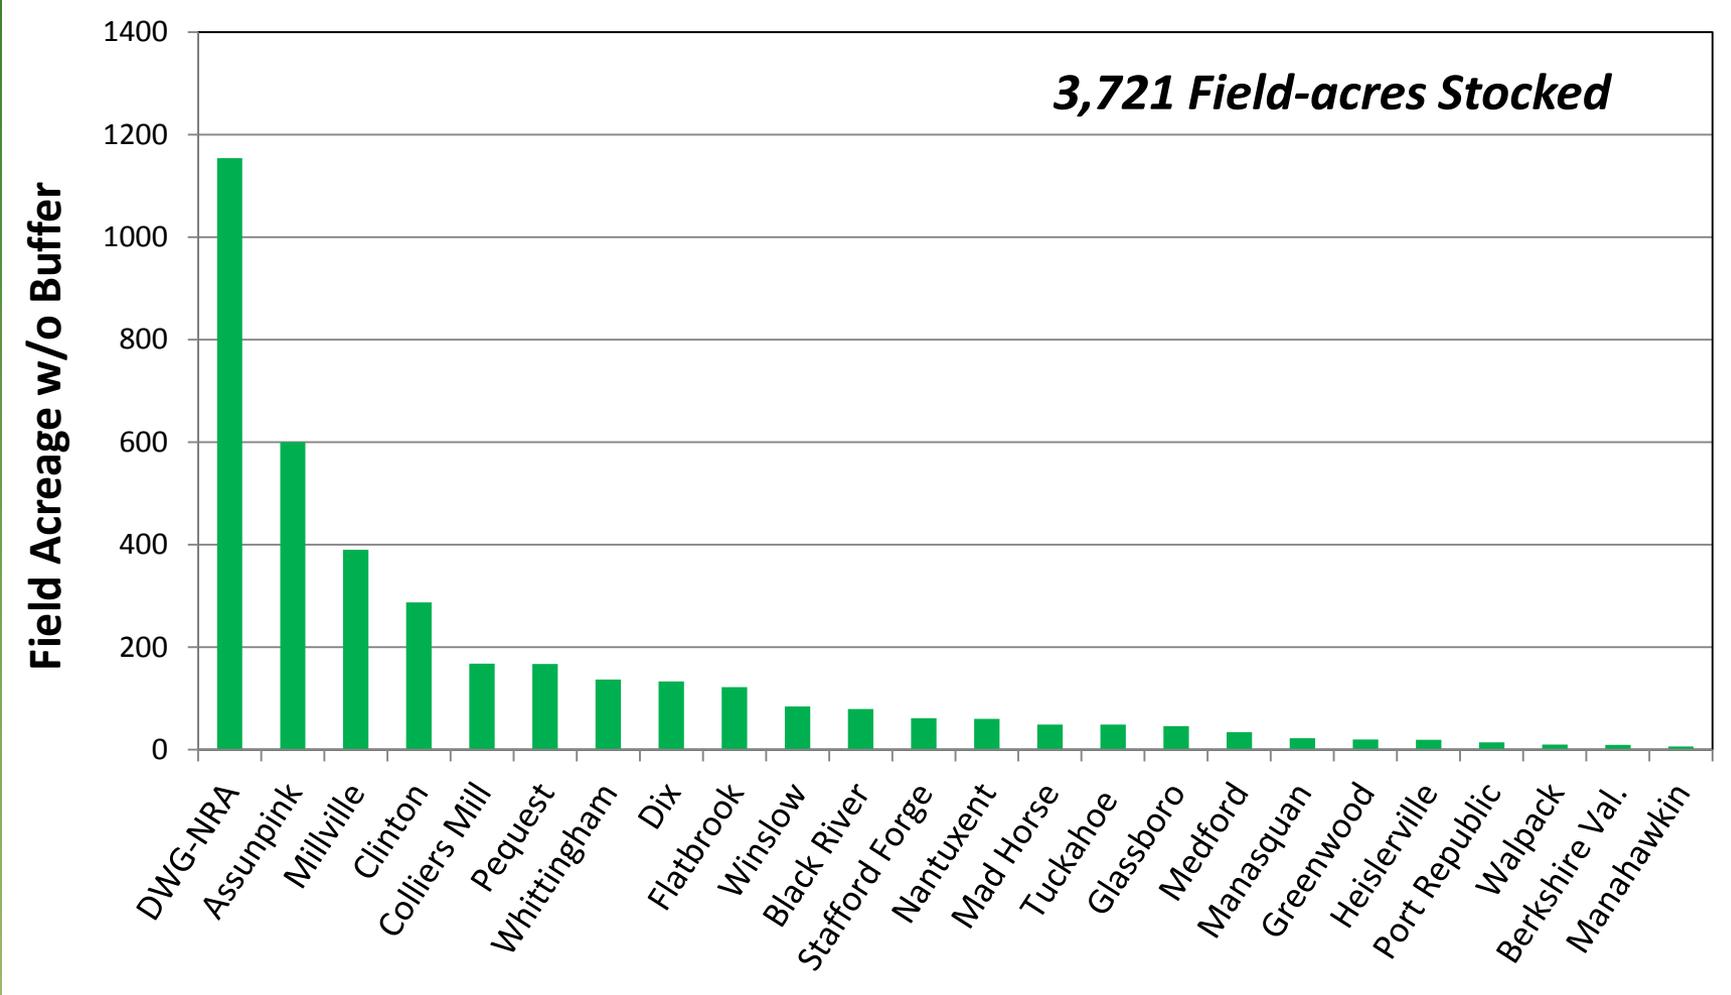

Quality of Hunt

- Size of Area Stocked

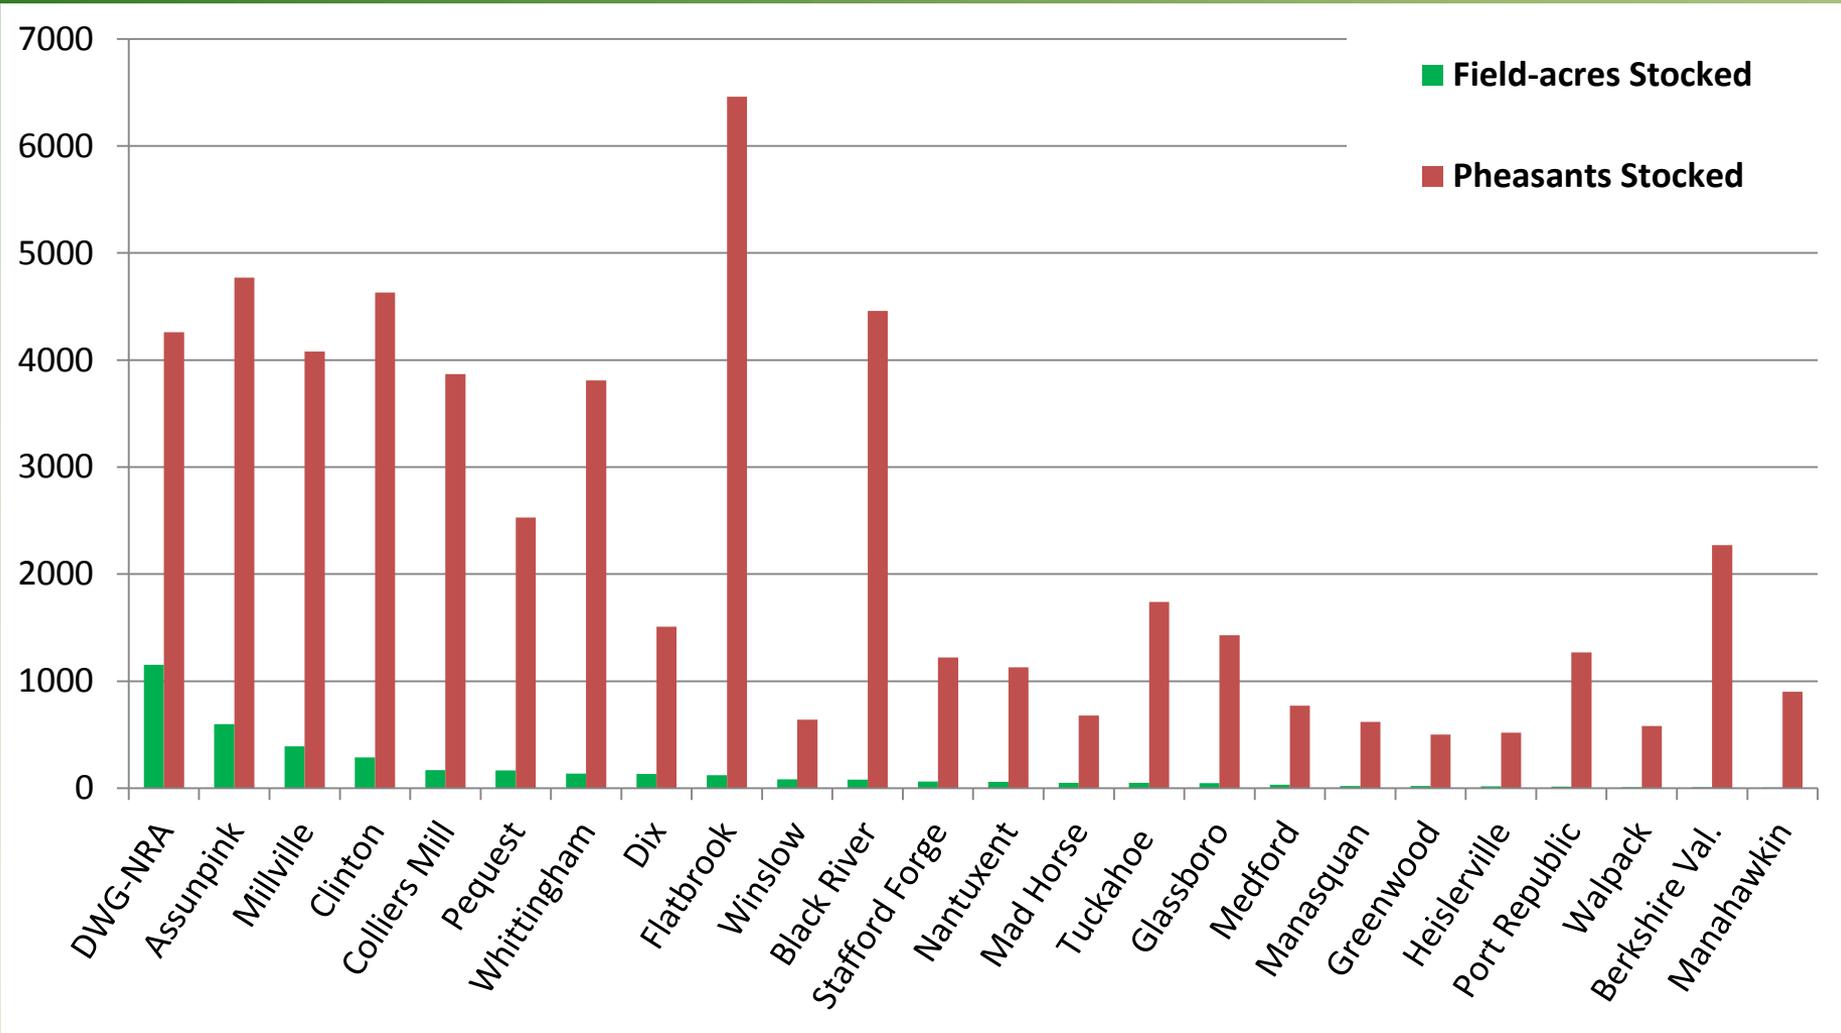

248 Acres Stocked

Quality of Hunt - Size of Area Stocked

Quality of Hunt - Size of Area Stocked

Quality of Hunt - Proximity to Home

Survey Question

How far would you be **willing** to drive (one-way) to hunt stocked pheasants and have a quality pheasant hunting experience in NJ?

Quality of Hunt - Proximity to Home

Survey Question

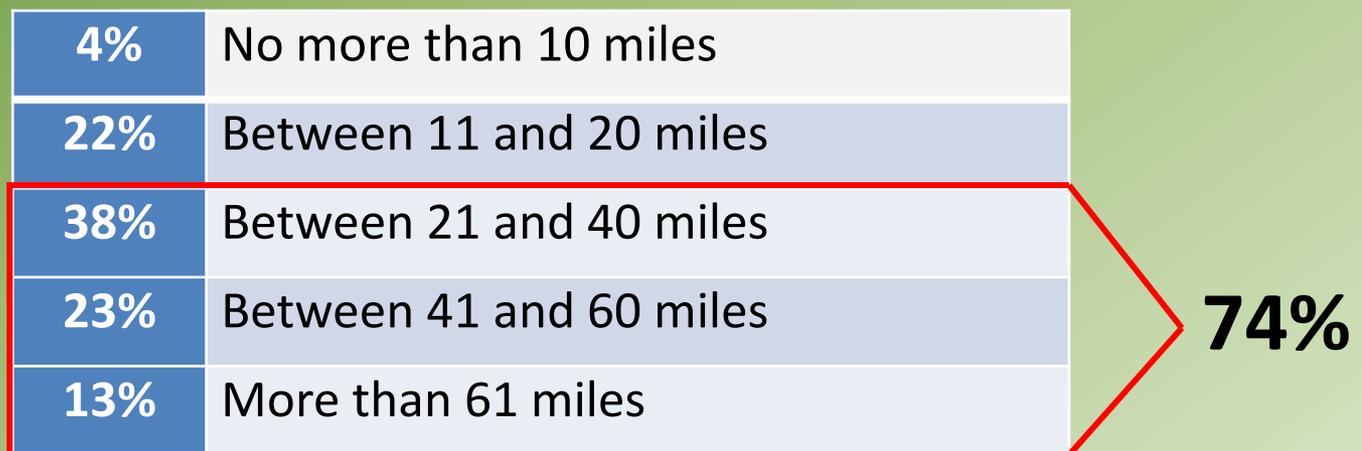

How far would you be **willing** to drive (one-way) to hunt stocked pheasants and have a quality pheasant hunting experience in NJ?

4%	No more than 10 miles
22%	Between 11 and 20 miles
38%	Between 21 and 40 miles
23%	Between 41 and 60 miles
13%	More than 61 miles

Quality of Hunt - Proximity to Home

Survey Question

How far would you be **willing** to drive (one-way) to hunt stocked pheasants and have a quality pheasant hunting experience in NJ?

New Allocation Approach

Maximize hunter safety and satisfaction by distributing pheasants according to an objective formula that uses “field-area stocked” and “proximity to stamp buyers” for each WMA to determine pheasant allocation on an *individual* WMA basis.

New Allocation Model

$$\text{WMA}_1 \% \text{ Pheasant} = \frac{P_1}{P_{\text{sum}}} \times 100$$

$$P = A (D+1) O$$

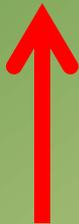

*P = pheasant factor; A = area variable; D = proximity to stamp buyer variable
O = ownership variable*

New Allocation Model

$$\text{WMA}_1 \% \text{ Pheasant} = \frac{P_1}{P_{\text{sum}}} \times 100$$

$$A = (1^{\text{st}} 60 \text{ ac} * 1) + (\text{ac} > 60 * 0.1)$$

$$P = A (D+1) O$$

P = pheasant factor; A = area variable; D = proximity to stamp buyer variable

New Allocation Model

$$\text{WMA}_1 \% \text{ Pheasant} = \frac{P_1}{P_{\text{sum}}} \times 100$$

$$A = (1^{\text{st}} 60 \text{ ac} * 1) + (\text{ac} > 60 * 0.1)$$

$$P = A (D+1) O$$

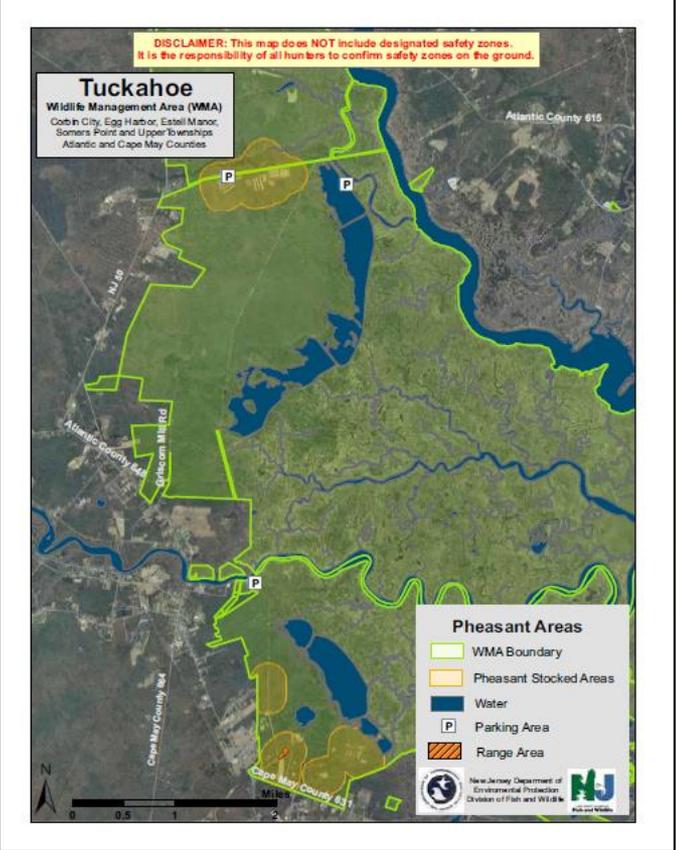

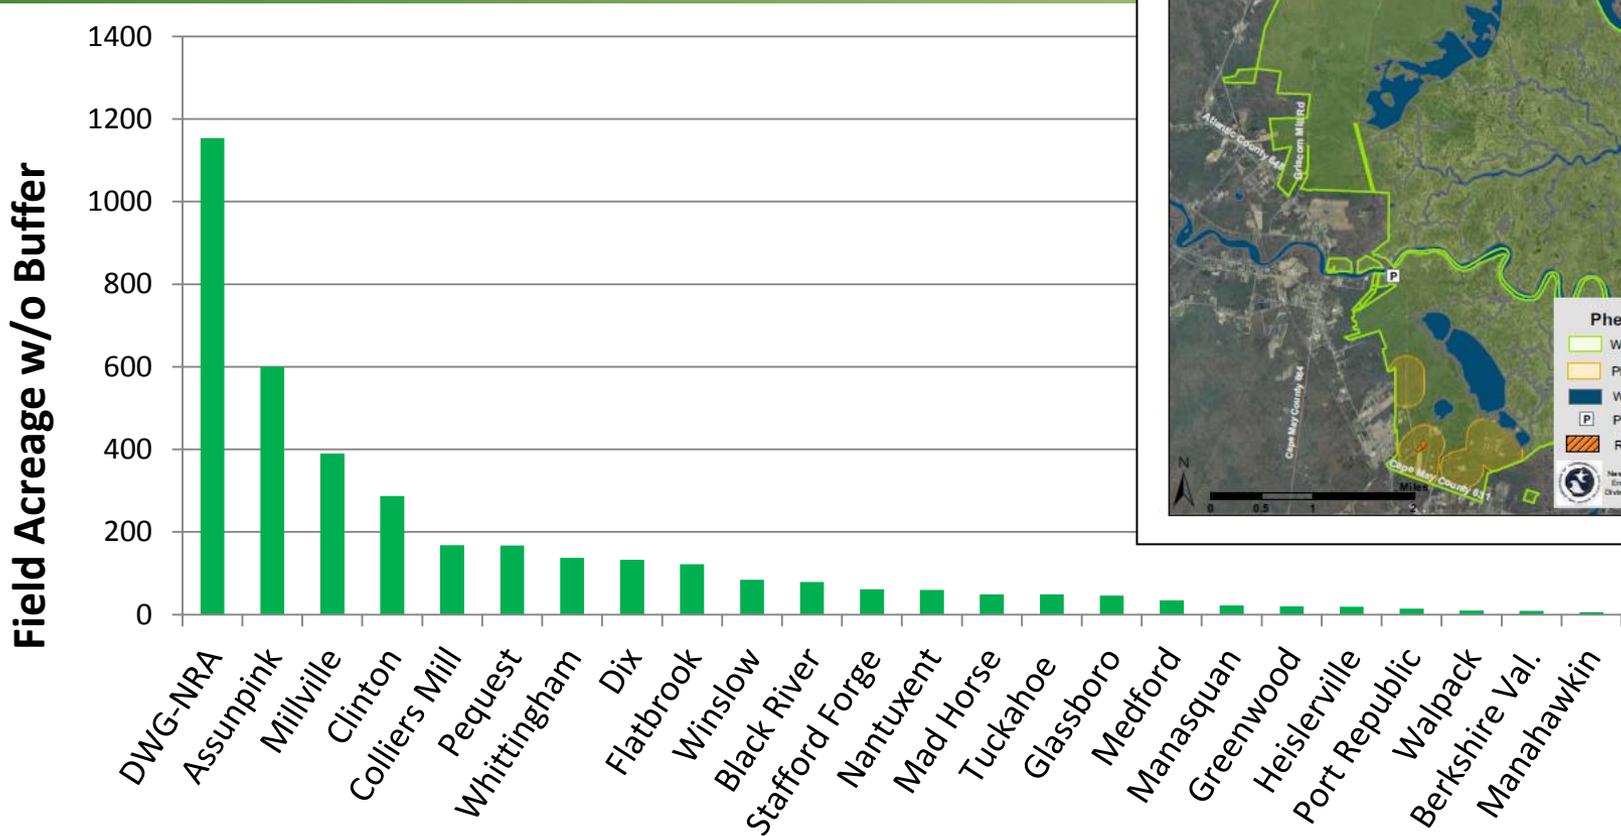

D = 0 if <30% w/in 40 miles
0.15 if 30-40% w/in 40 miles
0.3 if 40-50% w/in 40 miles
0.5 if >50% w/in 40 miles

P = pheasant factor; A = area variable; D = proximity to stamp buyer variable

New Allocation Model

Does the model “work” for you?

New Allocation Model

Does the model “work” for you?

- Is our goal hunter safety and hunter satisfaction?

New Allocation Model

Does the model “work” for you?

- Is our goal hunter safety and hunter satisfaction?
- Is an objective approach to pheasant allocation (*using measurable parameters*) appropriate?

New Allocation Model

Does the model “work” for you?

- Is our goal hunter safety and hunter satisfaction?
- Is an objective approach to pheasant allocation (*using measurable parameters*) appropriate?
- Does setting stocking levels according to area stocked & proximity to stamp buyers increase overall hunter safety & satisfaction?

New Allocation Model

Does the model “work” for you?

- Is our goal hunter safety and hunter satisfaction?
- Is an objective approach to pheasant allocation (*using measurable parameters*) appropriate?
- Does setting stocking levels according to area stocked & proximity to stamp buyers increase overall hunter safety & satisfaction?
- Should other parameters be included in the model?

New Allocation Method

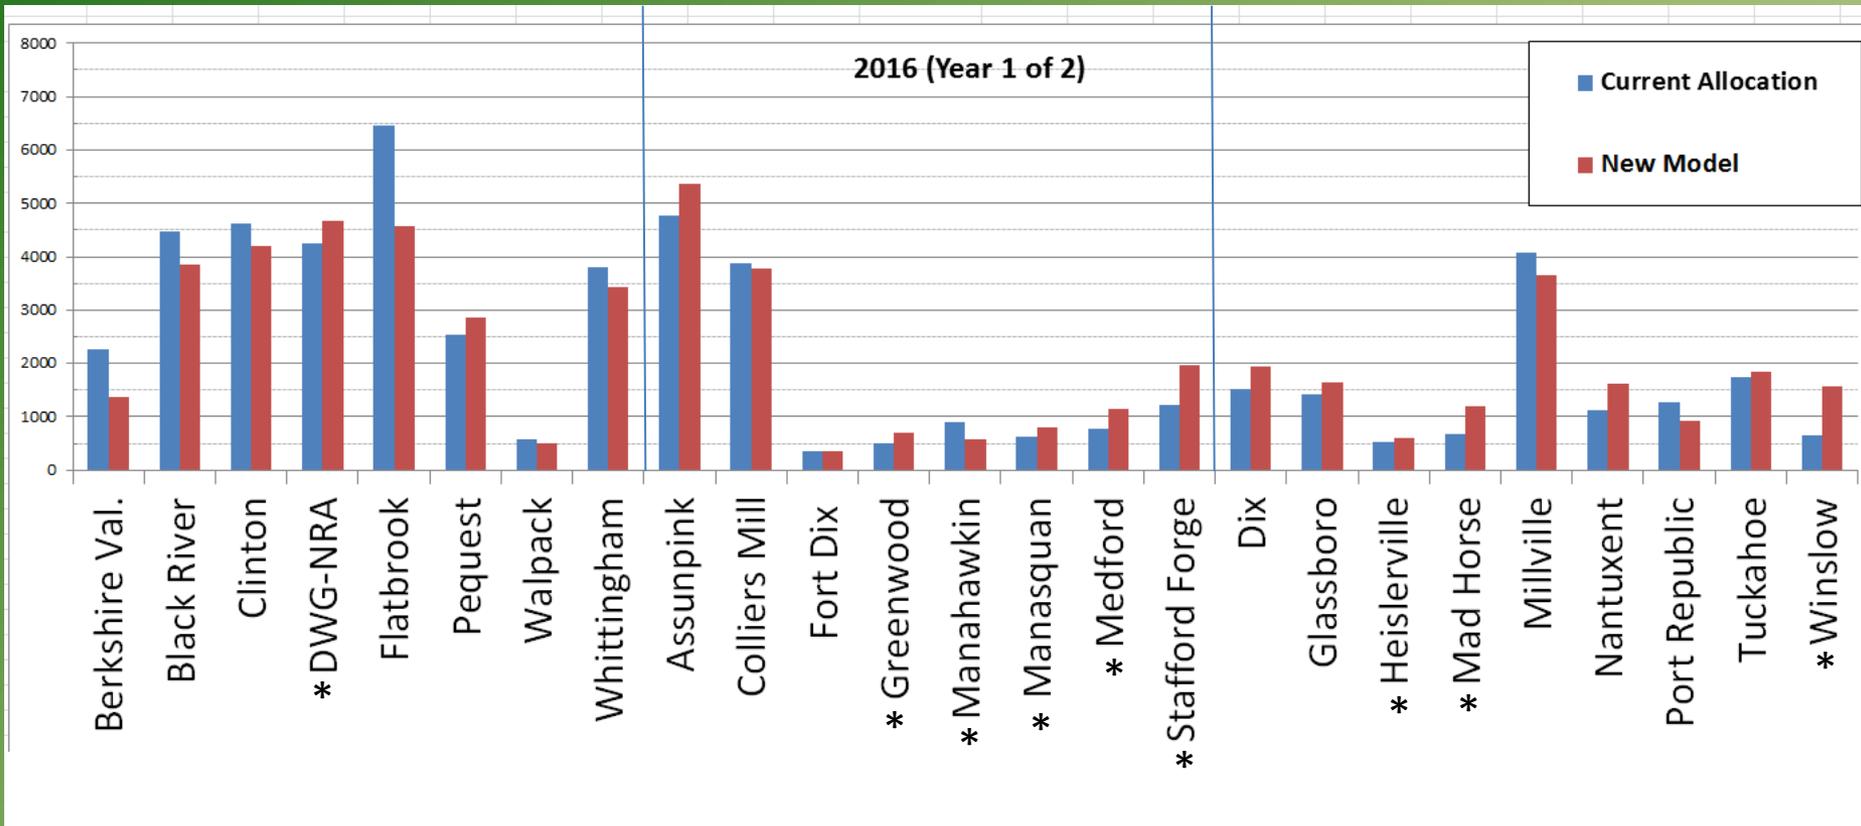

New Method

- **Step 1:** Birds allocated to individual WMAs based on results of the Pheasant Allocation Model to obtain season totals for each WMA.
- **Step 2:** Birds numbers spread across season (15 stocking days) by Regional Superintendent for each Region.
